

PRASHANTH SUBRAMANI

Full Stack Developer | MERN Stack Developer

📍 Chennai | 📞 +91 9042105683 | ✉ prashanth90807@gmail.com | 🔗 [LinkedIn](#) | <> [GitHub](#) | 🌐 [Portfolio](#)

SUMMARY

Full-Stack Developer with **5 years** of experience building **multi-tenant SaaS platforms** end-to-end. Shipped an HRMS/Payroll product used by 25+ client companies and 10,000+ employees in the UAE. Core strengths are React, Node.js, and MySQL. I've also extended production systems with GenAI features, including a **RAG chatbot** built using LangChain, Redis VL, and LLM Models.

SKILLS

Languages	JavaScript, TypeScript, HTML5, CSS3, SQL
Frontend	React.js, Next.js, Vite, Bootstrap, React Hook Form, TanStack Query, Redux, Micro Frontend
Backend	Node.js, Express.js, REST API Development, JWT Authentication, RBAC
Databases	MySQL, Redis, Redis Vector Library (RedisVL)
AI / GenAI	LangChain, LLM Models, RAG, Recursive Text Chunking, Vector Embeddings, AI Chatbot Development, Prompt Engineering, Amazon Bedrock, AWS SageMaker
Cloud & DevOps	AWS S3, AWS Lambda, Docker, Git, GitHub, CI/CD
Product & Planning	LLD, PRD, FRD documentation, ERD-based Sprint Planning, DB Schema Design (DBdraw), Notion, Google LM
Engineering Practices	Peer Review, Code Review, Agile Scrum
Tools	VS Code, Postman, Figma, Claude MCP, ChatGPT, Jira, npm, pnpm

EXPERIENCE

Full Stack Engineer — *4i Apps Solutions Pvt. Ltd.*

📅 Aug 2024 – Present

- **Architected schema-per-tenant multi-tenancy** for **Paydaysuite** (25+ client companies, 10,000+ employees), isolating each client's data at the schema level on a shared MySQL server, and designed the secure REST APIs (Node.js, Express.js, TypeScript, Sequelize) on top, strengthening data isolation and positioning the platform to scale horizontally as client count grows.
- Optimized platform performance: reduced payroll processing time from **30–60 minutes to under 5 minutes** (measured via MySQL slow query log) using indexed queries and AWS Lambda functions, and cut high-traffic API response times from 4–5 seconds to low milliseconds (query execution time) with Redis caching.
- Delivered Attendance, Timesheet, and Absence Management modules, expanding the product suite to **15+ modules** total.
- Built a production **RAG chatbot** that lets users get instant answers from uploaded PDF documents, cutting manual document lookup, as a self-directed GenAI initiative alongside core platform work; validated response accuracy through manual testing across representative queries.
- Used Claude Code and MCP-based tooling to automate repetitive module-development tasks, reducing token usage and cost during AI-assisted coding workflows.
- Collaborated with QA, business stakeholders, and peers across code reviews (4-member engineering team) each release cycle, tracking post-deployment bugs in Jira, and cut deployment time from 45 minutes to under 5 minutes (per deployment logs) by moving manual releases to AWS-based CI/CD pipelines.
- Built MCP servers on top of existing REST APIs, exposing platform data and actions for LLM-driven workflows and integrations.
- Directed planning and delivery for the **Attendance and Timesheet modules**: authored LLD, PRD, and FRD documentation in Notion (with Claude and Google LM support), designed DB schemas via DBdraw, ran ERD-based sprint planning, and led a **team of 4 developers** through a completed release cycle.

Senior Developer — *Asys Technology (Freelance, Remote — Mexico City, Mexico)*

📅 Dec 2022 – Jul 2024

- Owned full-stack architecture for **Unico**, a production business-management SaaS platform, from design through live payment processing.

- Shipped **18 functional modules** (Residents, Suppliers, Transactions, and Payments) using React.js, Vite.js, TypeScript, Node.js, Express.js, and MySQL.
- Integrated PayPal, Mercado Pago, and UPI, supporting an estimated **100+ secure transactions monthly** in production.
- Secured all 18 modules with JWT, OAuth 2.0, and RBAC access control.
- Accelerated high-traffic views through lazy loading, code-splitting, and TanStack Query caching.
- Tracked and triaged post-deployment QA bugs in Jira across releases, coordinating fixes to keep production issues resolved quickly.

Software Trainee — *HEPL – A Cavinkare Group Company*

📅 **Sep 2021 – Nov 2022**

- Engineered a dynamic GPRS tracking system, enabling real-time vehicle monitoring for a dairy logistics client.
- Digitized manual Excel workflows into a secure web application with comprehensive data validation, eliminating paper-based tracking.
- Applied Agile Scrum methodology across the full Software Development Life Cycle (SDLC) to support enterprise application delivery.
- Supported production fixes across HTML5, CSS3, Bootstrap, React.js, TypeScript, Node.js, Express.js, MySQL, REST APIs, and RBAC.

PROJECTS

AI RAG Chatbot — [Production](#)

Description: Chatbot that answers questions directly from uploaded PDF documents using Retrieval-Augmented Generation (RAG).

Tech Stack: React, Node.js, LangChain, NVIDIA NIM (Nemotron), RedisVL, Redis, Vector Embeddings

Implementation: PDF ingestion, recursive text chunking (LangChain RecursiveCharacterTextSplitter), embedding generation, semantic search, AI-powered responses.

Validation: Manually tested against representative queries across uploaded documents; tuned chunking and retrieval parameters based on observed response quality.

Paydaysuite — [Production](#)

Description: Multi-tenant HRMS and payroll SaaS platform serving 25+ client companies and 10,000+ employees, with schema-per-tenant data isolation.

Tech Stack: React, TypeScript, Node.js, Express, MySQL, JWT, AWS S3, AWS Lambda

Modules: Camp Management, Employee Allocation, Reservations, Maintenance, Role-Based Access Control

Unico — [Video Walkthrough](#)

Description: Production business-management SaaS platform for a Mexico-based client, covering resident, supplier, transaction, and payment operations.

Tech Stack: React.js, Vite.js, TypeScript, Node.js, Express.js, MySQL

Highlights: PayPal, Mercado Pago, and UPI payment integration (est. 100+ transactions/month), JWT/OAuth2/RBAC security, TanStack Query performance caching

CERTIFICATIONS

[AWS AI Practitioner Challenge \(Udacity\)](#) — Issued Jun 2026

Generative AI fundamentals, Foundation Models, Prompt Engineering, Responsible AI, and AWS AI services (Bedrock, SageMaker).

[MERN Stack Development](#) — HCL GUVI, Issued Jul 2023

EDUCATION

Bachelor of Engineering (BE) — Electronics and Communications Engineering

CK College of Engineering & Technology | Aug 2017 – Aug 2021
